

Membership with PT Oil Spill Response

Oil Spill Response Limited (formerly known as OSRL/EARL) is an industry owned co-operative which exists to respond effectively to oil spills wherever in the world they occur. Our membership consists of over 100 environmentally responsible corporations whose activities account for over 60% of global oil production. Besides oil majors, national/independent oil companies, more energy-related companies such as biofuel producers and oil traders are also enlisting as our Members.

PT Oil Spill Response Indonesia

To boost the country's oil production, the Indonesian Government has formulated a number of new policies such as the elimination of import tariffs on equipment used in oil and gas production. With favourable oil prices and enhanced recovery methods, many fields originally considered uneconomic are now set to commence production. Much attention is also focused on increasingly deep water offshore blocks, a relatively new development for Indonesia.

Oil Spill Response sees an increasing demand from E&P companies operating in Indonesia for its expertise in oil spill response and preparedness. To promote greater customer engagement with these companies, an Indonesia subsidiary, **PT Oil Spill Response Indonesia**, was set up. E&P companies with interests in Indonesia can now sign up directly with PT Oil Spill Response Indonesia as a Member to mitigate oil spill response risks arising from different stages of the supply chain. Spill responses require quick access to a wide array of resources for optimal cost management and effectiveness.

Membership Benefits - Expertise & Resources
