

Oil Spill Incident Controller E Learning

Better understand your Oil Pollution Emergency Plan (OPEP) and the wide array of issues that are associated with an initial oil spill response.

This course outlines the crucial decisions, considerations and actions that Offshore Installation Managers (OIMs) will need to undertake in the first 100+ minutes of an oil spill incident. Built around a typical Oil Pollution Emergency Plan (OPEP) covering critical decisions and actions, this scenario-based course is highly interactive, immersing you in an actual setting of the early stages of an oil spill, mirroring aspects of your own OPEP. It is highly customised taking consideration of not only the Australian National Contingency Plan, but the requirements by Australian regulatory bodies such as NOPSEMA (National Offshore Petroleum Safety and Environmental Management Authority) and AMSA (Australian Maritime Safety Authority).

Course Programme

Delivered through e-learning, you will have access to OSRL's online learning management system (LMS). This innovative digital learning system allows you to conveniently manage your study time over single or multiple sessions.

Key features of this course:

- Intelligent learning design – brain friendly learning experience. Not just reading through text and information, this course is highly visual, involving you in an interactive manner, immersing you in scenarios where you are required to process content and make decisions.
- Assessment for learning – hallmark for adult learning. You essentially absorb information in bite-sized chunks and are able to track your progress and understanding through quizzes and exercises. It is not a passive one-way learning experience, but very kinaesthetic with you actually actively engaging with the content.
- Self-paced delegate led learning - Ability to revisit topics as many times as you like before taking the final assessment. Two attempts at final assessment with a pass mark of 70%.

What will I learn?

This course will give you the knowledge and understanding in the following areas:

- International Convention for the Prevention of Pollution from Ships (MARPOL)
- International Convention on Oil Pollution Preparedness, Response and Co-operation (OPRC)
- Potential sources of oil spills
- Oil spill behaviour and characteristics
- Oil Pollution Emergency Plans (OPEPs) and their use
- The role of Australian Agencies
- Dispersants
- Response safety management
- Oil movement and quantification using the BONN Agreement Oil Appearance Code
